EPA starts Phase 2 of Kerdiffstown Site Investigation Works

09 August, 2012: On Monday 13th of August 2012 three rigs will begin to drill a series of boreholes on and adjacent to the landfill site. These boreholes will help the EPA to gather more data on the site and, combined with the recent geophysical survey, samples from these new boreholes will increase to our knowledge of the site and inform the design of the site remediation.

This phase of the site investigation will involve drilling holes deep into the landfill and drilling operations may generate some odour. The EPA and its contractors will be working hard to minimise these odours. If you experience odours from the site, please contact us at info@epa.ie.

The drilling is scheduled to last for four to six weeks.

For information about the EPA works at the site, go to www.kerdiffstowncleanup.ie
