I wish to express my concern about the proposed development plans for the Leixlip area including Confey, in particular with regard to the effect that this will have on infrastructure and the environment. Any increase in population which will result from the proposed development, must be accommodated with adequate transportation facilities including public transport, as well as other services including schools, health care and recreation - essential for health and wellbeing - this must include protection of adequate green spaces and parks, development of appropriate facilities for all ages of the population (e.g. playground for children, recreation facilities for teenagers, adults, older persons and including those with disabilities); this should include a public swimming pool which would encourage participation in activities which would promote health and wellbeing and help prevent obesity etc.
